Ok...I just tested Paris for the last half our and it hasn't froze once, even when opening a project that almost always froze.

I think it's fixed. We'll have to see if this intermittent problem has just been pulling my chain for hiding for the last half hour of opening and closing PARIS.

If anyone else with a multi cpu machine can test this, I would be most grateful!

Here it is...

I just put a call in to a production partner to beg the use of his multi CPU machine. Gotta be done; we're very close here.

I still haven't had it fail here since the last change.

I noticed that the freeze always happened when the EDS registers were being written to over and over. It would just stop in the middle of the writes.

I put a 4 millisecond delay after the write before the lock is released.

It seems to have solved it. I will be heartbroken if it turns out I've just been ubber lucky for the last 3 hours. :)

Thanks for the help, Kerry!

I'll take a test later on today. The last one is unstable with some freezing when it starts but seems to work well when it will start, in the small testrounds I have tried. So now I'm crossing fingers for this new one:-)

Again thanks for you work to hold Paris alive.

Erling

Mike, it seems that you have nailed it with this last one:-)

Have tested starting Paris a couple of hour without any freezing or hickups at all with C16 on my AMD Quad-Core Phenom Black Edition 9850 machine with 4 GB RAM in WinXP. It seems that THG Task Assignment Manager minimized with Paris locked to processor 4 (3 in TAM that's seeing the first processor as 0.) is working like a champ. I also tested a little bit with a couple of old project, that seemed to work normal.

I don't use IFCT at all to get the Scherzo driver use 1 CPU, since it allways couldn't start Paris that allways showed up with the 1/1 fault.

So it seems the waiting time is over to use Paris with modern double, triple or quad CPU's. Again thanks Mike, for your work to give Paris a longer life:-)

Hi Erling,

Thanks so much for trying it out and posting!!!

I've attached my latest build to this. I upped the UART write delay to 5 ms because I had the lockup once when it was set to 4.

I'm not locking the scherzo OR the app by using Toms utility, and I'm having no problems. This is so sweet! It seems to be fully threadsafe. It took me 2 months to track this down. :)

Let me know if you find any other bugs. I may have broken something else while trying to fix this. But, that would be a lot easier to fix than this was. :)

Also, I don't currently have a IF2 attached. Let me know if you do and have any issues.

Cheers!

Mike

The new one seemes to start up correct too, without any "helping hand" from TAM at all:-)

Erling

Mike...pleasae forgive a stupid question, but you mentioned putting in a 4 ms delay on EDS writes. Does this affect the latency in using paris when recording? Or is this just a start up delay?

Hi Rod,

It's a delay after a write before a second one can begin. I don't think it will make any difference.

All the best,

Mike
