Thought some of you that use Cubase or Nuendo with Paris or on its' own might be interested in this if you haven't upgraded yet, etc. I took the Nuendo users' offer to get it for \$199 (separate license/dongle) to run on a VST System link slave PC, though I'm enjoying the new features enough it has superceded Nuendo 3.2 temporarily on my main system.

C4 adds drag and drop inserts (to and from any channel, or the library). Very handy, and a much needed addition. There is an extensive library/preset capability to C4 to greatly speed up saving and loading presets for plugins, channels, VSTi's, mixers, etc.

One of the biggest new and unsung features is the Media Bay (and Sound Frame, and Loop browser) which accesses all media on your system, catalogs it by type and allows you to search, filter, drag and drop relevant files into your project - there is of course a preview for audio files, in addition to the ability to preview in context (e.g. project plays back, audio file plays in time, time stretched to match the project tempo - cool for loops that are cut to measure boundaries, not as useful for free form vocal tracks, etc). Sound Frame and the Loop browser are just versions of Media Bay with filters for audio and loops enabled, respectively. Not overly different, but perhaps saves a step over turning on filters in Media Bay.

The sequencer engine has been rewritten from what I understand. C4 feels more tightly integrated than Nuendo 3.2. It runs really well (not without some bugs still, of course).

C4 adds VST3.0 support, and new built in VST3 plugins. The new plugins with are actually very good - new EQs, compressors, expander, gate, chorus, delays, etc. They will operate in mono, stereo or multichannel depending on the channel format they are inserted on (the delays and chorus are not multichannel unfortunately). Btw, a 5.1 instance of the multiband comp eats up a lot of cpu power. The new VSTi's are also very good - Halion One is a rompler based on the Motif to some degree - no editing, but has quite a few useful presets. The other VSTi's are quite nice and creative and stand up well along side the Raptures and Absynths of the soft synth world (albeit not as versatile as either of these).

C4 adds the Control Room that is already in Nuendo 3.2 - a great feature for mixerless setups, esp. with key commands for switching between speaker configs (multichannel, stereo, mono, etc), 4 different monitor outputs, dim, talkback, monitor source selects, studio configs for headphone mixes, etc.

Instrument tracks are a quick way to add a VSTi with a track directly in the

project window (doesn't use the VSTi rack). The only downside is only a single stereo out is used. The VSTi rack still supports full multi-output VSTi's, but adds a dropdown list on a button next to each insert to select which outputs are enabled - easing the clutter of VSTi outputs in the mixer.

That's enough for now. fwiw...

Dedric

Hey Dedric,

Thanks for the report..But, you already know my question???

What about the audio engine (Summing bus) ..Improved?? Can you slamm it!!  
(Lol) ;)  
Thanks

Thanks for the info Dedric. Up through v.3 I was on the NFR gravy train so

if I want 4 I have to pony up full price. Not sure if that's worth it to me, esp. since Live has become the primary app I use and SX is started up only in specialized situations. Also, I'd be breaking compatibility with my fellow bandmates who are all on 2 or 3. We'll see though, it does sound like a bigger upgrade than they've done in a bit. As far as I could tell the only difference between 2 and 3 was the box.

Hey Lamont - of course, it goes to 11 now. ;-)

It includes a pretty good limiter and a loudness maximizer for crushing the  
living daylights out of otherwise harmless audio.

So, know digital artifacts and the like when mixing over 50 tracks with plugins?

Also, I hear that they dropped direct-X support? If that is true, then have  
have at least eliminataed some of their summing issues, but it really is  
too bad..

The Control Room is musch more intuitive than Nuendo's version..This (Control  
Room) is some good stuff.

I agree, Lamont, that control room feature looks very useful. Thanks for

the report, Dedic.

Cheers,

-Jamie

DX is indeed gone. Not a big deal to me as Autotune is the only DX plugin I used, and I'll probably use Elastic audio in Sequoia for tuning vocals - sounds much better. Some users aren't so happy about it though.

I haven't mixed over 50 tracks yet - just got it Monday.

The control room is actually identical to Nuendo's (3.2) - just new to C4. I agree - it is quite nice - a huge plus for monitor management, esp. with 5.1 and stereo monitor configs.

The score editor is also improved - biggest positive for me is the palettes are now in the left column as dropdown panels rather than floating - much easier to use now that I don't have to arrange them in my template projects and work around them.

Detric

Guys, how's the CPU drainage on v4? Worse than v3?

Neil

I haven't made any direct comparisons with Nuendo 3, but overall it seems better - more stable - no jumping cpu spikes. I had C4 at 90% while playing around the other day (multiband comp on a 5.1 buss eats up the cpu fast), and it didn't flinch.

Dedric

>no jumping cpu spikes

that's pretty major IMO. Probably worth the price of admission.

;o)

It looks cool. Control room features are nice, but the word is, it's the same old Cubase audio engine, not the Nuendo audio engine: (

Nuendo and Cubase share the same audio engine..

LaMont and others,  
Who does the best job on the audio side between Cubase and Pro Tools Le?  
I'm still trying to decide between the two. I can get a academic version  
of  
M-Powered Pro Tools le for \$150 as long as I want to use M-audio a interface.  
Considering a Project Mix I/O.

respect  
Nappy

I thought they had moved to that engine years ago, but I read on GS or some  
where people said that it was still using the old Cubase audio engine.  
I've been misinformed.

Imho.. :) Pro Tools Sounds the best, and works for pretty much for all Genres  
fo music and it's mixer is very flexible.

Now, Cubase's editing,workflow, and sound quality makes it a formidable  
weapon, as well as it's price.

For me, SX & Nuendo cannot handle the mid to big mixes (40 Plus) with plug-ins, mixing aggressively. The summing bus (to me) seems to breakdown when. If you mix safe(staying in the -4 -6 db) ranges on your channels, then SX/nuendo will be fine.

Pro Tools LE/M-Powered-Has that nice, very true top end sound that's heard on many records. Suffice it to, it's very easy to mix on PT (LE/M\_)..

So, no DirectX equals no Waves Plugins?

Hi, Mark.  
Go here:

<http://perso.orange.fr/vb-audio/us/products/dxrack/dxrack.htm>

Scroll down and there is a link to a free fully functional DX-VST chainer which allows up to four DX plugs to be inserted into a non-DX compliant host.

It's not often I've needed it in Paris, but it has bailed me out a few times with older DX plugins which don't play nice. (Usually the opposite scenario with Paris..)

Preset management works well, too.

Kim

Just found this useful looking tool on VB's site:  
[http://perso.orange.fr/vb-audio/us/mm/plugman/vb\\_plugman.htm](http://perso.orange.fr/vb-audio/us/mm/plugman/vb_plugman.htm)  
It's a plugin manager which apparently lets you remove or reinstate plugins  
at will. (without uninstalling..)  
Reckon I could use it to tidy up Paris's tiny plugin window.  
Haven't tried it yet, though.  
Kim

Ok, I received my upgrade last night and installed it. Wow, very nice! :)  
The cool part is my Waves Plugins are all there and working like a charm. I  
did loose my AutoTune but then again when I have used it in the past it was  
always within Wavelab. Steinberg did add nice new plugins to the mix.  
They've always had the "cheesy" reverb, delay and compressors but they've  
revamped them and with the little I played with them last night they are not

half bad.

I also loaded up a few of my SX3 mixes and noticed the CPU performance was improved. One mix I had in particular used to really push my CPU usage but after opening it in Version 4 I noticed the CPU usage was dropped.
