>Well, I got the Gigabyte K8NS with an amd64 3500 cpu going with Paris. I got
6 eds (in a 13 slot magma) and 2 native submixes filled (32 tracks in record
at a time)for a total of 128 tracks, doing some silly stuff like moving windows,
open and close windows, open paint and draw a nice picture, save it and open
it, all while playing the 128 tracks. I didn't bother with any plugs, but
I'd say this set up is at least pretty stable with Paris. After I did this,
I noticed that 4 of my eds cards were sharing an irq with the matrox 650.....so
I'd say that was pretty good that it could do that much while sharing with
the agp.

>Yasser,

I would check to see what components are recommended by Digidesign first of
all. this may be more crucial than what you need for Paris. There are some
threads below that are discussing new Paris systems and the mainboards that
people are using. If these are also compatible with the Digidesign hardware
and you can configure a system without driver/IRQ conflicts between the
Paris and Digidesign hardware, then you might be good to go.

This is one of those situations where you might consider using an older Mac
G4 and OS9x, if the Digidesign hardware will work on this. That way you
could have dual processors available for running the Digi system.

Anyway...it's something to consider.

;o)
