Goran and Mike,

I have Altiverb 5 working here on XP. I'm not crazy about it though.

Is 6 different? Mine is wrapped with FxPansion ver 3.3 .

Goran, I'd suggest SIR if you want great reverbs in Paris or better yet check out Mike Audet's new Paris reverbs! They smoke the stock ones that came with Paris.

Tom

We only use Alti verb for Orchestral stuff...My Main go to verbs are as follows:

-Wizoo W2 verb  
-IK Classic Reverb  
-Princeton 2016 Plate Verb  
-Waves IR1

For Paris, I love the Original Plate reverb..I have not had a chance to listen to the new Verbs form Mike..But, If Tom and other say they are better than my fav stock Plate, then i'll I'll their word..

Please can you tell me whats that mean wrapped with FxPansion ver 3.3 ?  
How can I do that?

on a mac? Don't think you can. FXpansion is PC only.  
Sorry Goran.....

For some reason I thought you were on a mac.. apologies, my bad totally. Probably a hold over from remembering when Altiverb was Mac only. Getting older sucks sometimes, heh.

FXpansion is a directx~VST adaptor. Either versions 3.3 or 3.0 work with Paris.

I believe it's been posted here before and I expect if you put up a usable email address somebody here would send it to you on the group.

3.3 is reported to have a lower latency, generally and is what most users of it w/Paris are doing.

Essentially, Direct X doesn't work so well in Paris... VST is much better. The story goes that IntDev didn't code it and it would never have gotten better w/o replacing the code anyway. A DirectX plug in to VST plug adaptor is needed to make things a bit happier. In other words, your DirectX plugs ins will be in a shell, or 'wrapped' by FXpansion to make them appear as a VST plug in Paris.

Make sense?

FWIW, Cakewalk/TwelveTone bought the adaptor at version 4.0 for inclusion into the Sonar line of DAW software. Unsure if it even works w/Paris.
