
Subject: Paris makes static sound/ground loop?

I'm getting blasts of short static sounds. On every project so it's something in the set-up. I also was reading the Laptop noise thread and thought this is my problem too.

If it is a ground loop, would it be electrical for the computer or the pre amps or various other outboard gear I'm using, or could it be any other problem?

thanks,

michael

This doesn't sound like a ground loop issue to me - could be some kind of clocking problem or software/hardware issue. You might check your EDS cable connections and might also try re-seating the card.

cool, thanks Carl, I'll try that. It seems to be better since I tried the grounding problem, but I'll give it more of a workout tomorrow to see if I get any more noise explosions.

I'll ditto Carl's thoughts - sounds like clocking problems to me as well.
