I cloned my system disk using Acronis and that part was smooth.
Actually, pretty straight forward. (I'm on XP pro Sp2).

I had to re-install my Unitor8 MkII (usb). Ok, no big deal even though
the install process makes about as much sense
as a monkey on crack. (Maybe I'm on crack and don't know it.)

Now the good part... clicking on the Paris Pro icon causes an immediate
shutdown and re-boot. After re-boot,
there's one of those microshaft error boxes saying the computer has
recovered from a serious malfunction or whatever.

Before I go trying to do a complete re-install of Paris does anyone have
a bit of advise on a possible
alternative to a complete re-install? I'm using 1 MEC, 1 C-16, and 2
cards, Intel Mobo & CPU. This set up has been stable for
years. Then again I don't do much heavy editing and tracking.

Thanks very much, Jim

Did you try starting the computer again.

I got one of those messages right out of the blue last week and next start
up...nothing, no probs

sounds like you may have your effect subsystem (XP) drivers set up wrong.
Uninstall (if you installed) and be VERY diligent about the paths when you
install again. Reboot after EVERY move. Uninstall, reboot. Install, reboot.
Fire up Paris.
Workin'?
AA

Thanks for weighing in. Looks like I'm in for a re-install. My Paris configuration was perfect before the clone process. So, Acronis may be the culprit or, maybe like scott v, I should have tried Ghost. Or it could have been pilot error. Like it usually is 8>)

I'll be going the route you suggested, Aaron.

cheers, Jim

I been using Norton Ghost for many years... absolutely no problem restoring or backing up...

Although, be aware that if you have an old restore and you change something drastic like motherboard.. it may cause problems... I try to restore with just the OS, paris and plugins... and that's it... AV and all those other goodies is best left for a clean install....

Thanks, Ed. Good to know.

I re-installed the Paris program from scratch. No go. I then 'divined'
that I had to re-install
the card drivers separately in device manager. Now clicking on the
Paris icon doesn't
shut down the computer. Hey, it's a start. Now for the XP subsystem.

Next, hopefully ID will give me a new response code. I'll just keep
digging.

Jim
