I can't seem to remember, is Nforce chipset good for audio? I'm looking at getting a MSI P6N SLi FI with a Quad core. I can get a system locally with 2 gigs of ram and a 250 harddrive, DVD-RW for \$999.

respect

Nappy

PS I'm doing great! I should be able to start working out soon. I see the doctors tomorrow.

Thanks Lamont,

This board has a NForce 650i chipset, do you know anything about this chipset?

http://www.msicomputer.com/product/p_spec.asp?model=P6N_SLI-FI&class=mb

The 650 Chipset is fast. Good choice..Although I tend to go with Gigabyte boards, but the MSI boards are cool..

Thanks LaMont,
You have been a big help.

respect
Nappy

I believe there may be problems with UAD1 on that chipset, but if you don't use it, no problem.

Check with Chris Ludwig before you take the plunge. NForce4 chipsets had some issues with UAD-1 DSP cards and maybe other hardware.
