>Just noticed accidentally in a search... today marks the 1st anniversary of the shutdown of Chuck's newserver.

Good to see a year on that things are moving on as usual. Many of the old crew are still around, and my server seems to be happy in it's role and doing the job pretty nicely. All the hardware is handling the load.

In the next couple of months I'll be moving the server to a new home. :o)

Cheers,

Kim. Yes indeed, it is very nice to see that we are keeping it alive, and a very big thanks to you I might add.

Congratulations !, and thank you

for keeping this community together.

This group is unlike most others - I speak

with parasites almost daily and marvel at

the brotherhood of this place. Even when

there is disagreement, differences eventually

get put aside and great ideas ( Chuck please pardon the pun )

are exchanged.

Paris en vie long !

Morgan

Or even more closer to how model based Sci Fi movies looked cooler than CGI  
ones do.

Also, it sort of Platonic, or was that Aristitotle? an actor has to be somehow  
bigger than life, different.

Recordings are like this too. "when the levee breaks" does not sound liek  
a bnad in a room, it sounds like a movie. (although A John's said he would  
go for a sound of the band practicing)

That is why I like analog delay pedals and space echo's and spring reverbs  
so much too.

I only wish I could get them without hiss, I don;t like that so much.

I received a call from none other than the "Deejmeister" himself. It was really cool speaking with him and he provided me files to listen to which proved enormously helpful with making my final decision.

In addition to Deej, I've spoken with more than a few Parasites over the years including Aaron Allen, Nappy, Lamont, Morgan (East Coast), Chris Ludwig (built my first Paris rig) and Gene, whom I've known for quite some time.

The knowledge and information shared by this groups proves quite useful in my day to day Paris "grind" as well as other audio endeavors.

Just wanted to say thanks to all....much appreciated!

Tyronel need to be able to simultaneously interface with at least 3 x pair of s/pdif I/O along with 8 x analog I/O and at least 56 ADAT I/O to achieve studio bliss. If I don't have this I will die. Madi appears to be solely ADAT so I would have to do an either/or with the last lightpipe I/O using a format converter and an external AD/DA.....resulting in my demise. I really would lile to keep exactly the setup I have and be able to add just another 8 analog I/O plkus another s/pdif and lightpipe interface. Much joy would ensue.
