eet..

Everyone who's played there since I hung those has loved 'em.

Just random thoughts.

I only started watching because I had seen Ty Taylor in "We Will Rock You" in Vegas.

I was never an INXS fan.

pab"Boxen"

Thanks Paul; this has got to be one of the best malapropisms I've seen in a while.

Just a note on thermal pads: I recently tried to remove an Athlon 64 chip that had been installed a day earlier with the supplied pad and couldn't get the heat sink off. I pulled with force until the chip came out of the socket with the pins locked down. That would never happen with grease.

It was his k-67-alike (I think his model # is ck-67), and yes, i did it myself - it's easy as long as you're careful. You're just using one side of the capsule is all, since the m-147 is a cardioid-only, and the -67 is a dual-sided capsule.

What kind of improvement did you see?Got an M147 waiting to be ripped apart:)

HUGE improvement... that mic was pretty dark & inarticulate before, with this capsule it's like a whole 'nother mic altogether. Just make sure you get the mounting pin/bracket from Peluso, too - the screw holes in the one in the -147 don't line up right with the Peluso capsule.

Neill know at least one of you has the facilites & capability to do short-run CD's... here's what I'm looking for:

A gal I know has a voice stu

For instance the highpass seems to leave a bunch of low stuff int here..but the graphic looks like it is cutting everything.

Are there any more "accurate" eq's out there.. Say I want to cut evrything under 90hz..it it could make a hard cut t
