Subject: Installing 3.0 98se .cfg file

ok i'm helping a friend who is on 2.2 and i have a number of questions because i can't seem to remember the answers. i don't use paris during recording anymore.. it's just a summing box for me now. paris just sits on my 98se machine waiting to do what it does that we all love.

#1. can 2.2 and 3.0 exist comfortably on the same 98se machine?

#2. what were the tweaks/partial fixes for the "Que project" error? something involving tweaking the paris .cfg file and setting up your disk i/o and overview settings correctly?

#3. didn't we narrow down the parameters/circumstances in which the "Que..." error would occur so we'd avoid it?

#3. wasn't their some who had a "secret/unreleased" 3.1 beta with the "Que project" error fixed? Sandy are you still around these parts??

#4. where can i find that old link to the 98se and paris tweaks for audio optimization?

THANK YOU VERY MUCH!!   i know those are alot of questions and all of your help is greatly appreciated! time is valuable. grazi!

Hi Jeremy - there's some info on the WIki about tptQue - there are different tptQue errors, what specific error numbers are they?

Quote:Hey Pete,

I've dealt with this issue quite a bit.

I've even caused it on purpose to try to figure out how to fix it.
(recording with looping on (with no punch points) will cause it)

Anyway, in ALL cases that I've seen, the error seems to be caused

by a corrupted segment on the playing field.. actually, I believe
it is caused by a corrupted crossfade, to be specific.

Whenever, I get this error, I remove the last take/edit from the playing
field (between the dialogs popping up), save, quite and restart paris.

At this point, the problem seems to go away.

Good luck!

 Bill

Try increasing your disk cache and overview sizes in the Config menu. On
the problem project, clear the Undo buffer and delete the Markers.

I never have that problem anymore (like once every 6 months now) since I
increased my disk cache size to 128MB and my overview to 21000KB.

BT

Never heard of a secret, unreleased beta myself, sounds intriguing. John's PARISNotes are linked
in the header up top, there's great configuration info there; I've organized some of it in the Wiki
here.
