Subject: MMC with Paris anyone?

Hi,

It's been awhile I know but I am still hanging tough with Paris even though our studio has a dmx-100 and pro tools TDM running. I've had luck syncing Paris to the DMX-100 via MTC but no love with MMC (Midi machine control). My paris midi devices only show an output port to my usb midi interface but I need an input port to receive midi from the DMX-100. Could my configuration have a problem?

Any ideas? Anyone have success with MMC and Paris?

Thanks a bunch!

Chris

Is it possible that the in and out port have the same name? I remember there being a problem with that. You might fool around in the config files or ask tech support for the DMX about that particular.

Thanks Aaron,  
I tried several ways of patching and I've only been able to slave the DMX to Paris. I'll try a different config set-up (in paris) to see if I can get my USB midi interface to show up as an output device. So far it only shows the USB midi input and both input and output of Paris midi. Thanks for your response. Anyone else with some insight? Thanks!  
Chris
