Guys, I'm on the receiving end of an SX3/Nuendo production that the artist
has pulled from another producers hands.   Was originally told this was a PT
project but it isn't. I've got the drive and it's SX and Nuendo stuff.
Previous prodicer says tracks are in edited/punched state, lots of cuts,
slips, etc.

Q1. Can I open N3 files in N1 and render to wav.

Q2. If yes on Q1, without forced SRC?

Q3. Dispencing with Q1, 2 above, what's the minimum I need in order to
simply export audio from or N3?

TIA,
W. Mark Wilson.
