I recntly re installed paris 3.0 and noticed that my compressor would only work on one channel in the aux. When assigned to another channel, it mutes that channel, and the meter always stays on full. Also, my native effects are missing.

Hello Joe,

It appears that you need to reinstall the effects subsystem and carefully follow the install path. It puts them into an extra folder by default and you will have to write down the path and make sure it is installed correctly. Sorry I don't have the specific detail but if you study it carefully you will see an extra folder by default.

Regard,

El Miguel

Joe,

Make sure you dont have the 'pc freebies' FX installed.
It's buggy and causes problems like you're having.
