Greetings all.
I'm trying to transfer a clients' old adat multitracks into paris.
I have one ADAT module in mec 2.
I have successfully slaved an external cubase machine via adat sync and a
frontier dakota in the past.
The ADAT responds to the paris command "locate to present time", but starting/stopping
paris has no effect on the ADAT.
These machines are ADAT XT's.
Any clues as to what I'm doing wrong?
I understood this was supposed to be straight forward.
Thanks for any advice.
Kim
