Does anyone know what: _tpt QueProject Error in setting direction. Error code 1879048261/70000045 mean?

Just started showing up when during recording session. I'm running on a G4- 9.2.2
Please help! Thanks, Greg O

Did you save a project and then close Paris with the loop function enabled? If so, this is likely the reason. Open the project, disable the loop function, save the project under a new name and you should be good (if this is the error I think it is). This code is one of the *features* that isn't mentioned in the manual.

good luck,

DJ

also

I've dealt with this issue quite a bit.

I've even caused it on purpose to try to figure out how to fix

it.

(recording with looping on (with no punch points) will cause it)

Anyway, in ALL cases that I've seen, the error seems to be caused by a corrupted segment on the playing field.. actually, I believe it is caused by a corrupted crossfade, to be specific.

Whenever, I get this error, I remove the last take/edit from the playing field (between the dialogs popping up), save, quite and restart paris.

At this point, the problem seems to go away.

Good luck!

Try increasing your disk cache and overview sizes in the Config menu. On the problem project, clear the Undo buffer and delete the Markers.

I never have that problem anymore (like once every 6 months now) since I increased my disk cache size to 128MB and my overview to 21000KB.

The looping is a button on the C16 and on the transport window that has a start and end point to loop over and over. You probably don't have that on if you don't know what it is.

Have you been doing any crossfades?

I would bet on your paris.cfg file needing optimizing.
C:\program files\ensoniq\paris\paris.cfg

This is what mine is set to:

*** PARIS Configuration ***

*** ENGINE configuration parameters ***

* Cache Size in MB

CacheSize=128

* Overview cache size in KB

OvwCacheSize=8192

* I/O configuration

IOSize=256

* SubMix Cache Size in KB

SubMixCacheSize=256

ManualRecDelay=4096

RecXFadeLen=20

Use32BitWinMTC=0

DisableDirectX=0

MasterOutputCard=0

ScrubMaxRate=1

WheelSensitivity=20

WheelInertia=68

CSProVersion=ABCDEFGH

VSTDirectory=C:\vsts\

MIDIPlayDisabled=1

Also,

Try resetting the record path to a new empty folder.

Or if you are on the Mac and running anything before OS 9 you may have run out of open files (MacOS limit). If this is the case try clearing unused files from the audio window.

Thanks John....I'll give this a try. I'm very new to this program
and not sure what crossfades are yet,sorry.

Greg, What is your setup? Mec, C16, cards, Pc type? Post questions here.
It's a very helpful NG.

two lines of thought on this one is your set up settings which john has addressed. the other which he touched on was the loop function and the other is the punch in function. if either was active (on) on saving a file this error will occur. the best temp work around is to as soon as the song loads turn off those listed if on and immediately hit the save as and rename the file. do not open any gui or hit play as this will trigger the error message and pretty much lock you out from doing the above.

do not open any gui or hit play
as this will trigger the error message and pretty much lock you out
from doing the above.

.....awwww....c'mon man!!!! You're such a spoilsport. Let him have a half
day of fun with this like everyone else.
