[View Forum Message](#) <> [Reply to Message](#)

Well ****!!!! Before I sold off my Paris rig, I rendered a bunch of audio files.. These were old demos that Amy and I did back in the mid 90's. They were tracked to 2" 24 track and then archived to ADAT. Later I dumped them into Paris. I want to use some of the tracks for a project I am getting ready to produce here. Apparently the Paris render corrupted the files. They are not batching properly in Wavelab (I posted in another thread about this). They are also having problems when converted with PAVWAV. Something told me that if I sold off my Paris rig, something like this would happen. Luckily I've still got the ADATs and an old XT-20 that I kept around. I'm going to have to recreate some edits that I did subsequent to dumping them into Paris, but that's a piece of cake with Cubase.

That blows DJ.
I rendered a ton of files as well before switching.
So far the ones I have visited have been ok.
You got me worried..
