Hey Mike

I plan to upgrade both my machines to multicore rigs in the new year and you can count on my financial support.

Hi All,

I think the driver is ready for prime time. Thank you so much to everyone who tested the driver and reported back their results. I have to admit that I haven't kept a list of who that is. If you beta tested either the PSCL or the Scherzo, please send me an email (mike at mikeaudet dot com), and I'll send you a release build of the driver. The release build has a couple of additional bugs fixed, and it's compiled in a way that is faster and uses less RAM (because there is no debugging code). I don't want anyone who helped make this happen to have to pay for the driver.

Some may think I should just give the driver away. But, I'm a new teacher living paycheque to paycheque, and I don't think it's fair that I should be working for free. I've revamped ensoniq.ca, and I'll be adding more audio samples over the holidays. It should allow downloads without waiting for me to send an email. I'll be starting a google adwords campaign to get the word out to PARIS users who don't come here. With a little luck, I'll get a Grace m101 out of the thing.

My next steps are helping Kerry out with his mirror site and getting the ASIO driver updated - I'm aiming for low latency and 24 bit.

Thanks again to everyone.

Cheers! We did it!

Mike

Absolutely you should not be giving away your work for free. I know firsthand what a hard line that is when doing something you love, but to continue the development man, you gotta get something in return to keep feeling that you want to push forward for your hard work. There is also an issue of respect that things free do not earn.

Mike, even though I don't still use Paris, or even own one now,  
Thankyou...you're a genius .

Congratulations.

Thank you so much, what would Paris be without you Mike, nothing:-)

Sweden is all on your side, I know:-)

Best Regards

Mikael

Mike -

I moved over to Cubase in part because of the lack of support for multicores machines by PARIS. Your work is making me rethink things. I'll be happy to purchase the new drivers and see how PARIS likes its new environment :-)

It would be a bargain at twice what you're asking - you should \*definitely\* get a Grace 101 out of the deal, at the very least!

Let's talk about the Google adwords campaign - I'll be starting a similar push when the forums debut and with some brainstorming we can find a way to get maximum exposure (and thus more of our far-flung brethren and sistren back in the fold).

My wife is a teacher. One of the best. I honor your choice in careers. Teach them well. They are the future.

I'd like to buy all your plug-ins (even the ones I already own), but would probably wait till you have them as direct downloads? Either way is fine. I need that reverb, though...

I guess I was a beta tester. I didn't have an ADAT card, but you sure fixed my problem (dual CPUs). I want to pay you for your work, if I can.
