I've been trying to reach my studio partner over the last week or so. Nothing important really.....just to let him know that I was still waiting on a few things to trickle in so I can finish up the new studio configuration before we start our next project. I hadn't heard from him but he's a touring musician and also has some stuff going on with a home building project in Hawaii so I figured I'd hear from him when he had a chance to come up for air.

I just got a call from him. He was at our local hospital in the ER a week ago Tuesday due to his wife having some problems. He started getting a severe headache and then collapsed and started convulsing. They were on it immediately and a spinal tap showed he had blood in his spinal fluid. Further tests confirmed that he was having a cerebral hemorrhage. They called his family in Oklahoma and put him on a life flight jet to Denver with a 5% chance of survival. His brother is a trauma surgeon in Oklahoma city and had already told his parents to prepare for the worst because the chance of his waking up were around "zero". Everyone flew to Denver to wait it out.

Instead of an arterial bleed, it was a vein. The bleeding stopped on its own, without surgery and he's back home and though a little weak, he's entirely normal..brain function 100%. The doctors said this is pretty much unheardof...a one in a multimillion outcome and that he should just go on and live his life. The chances of it happening again are about as remote as his chances were of survival when it happened.

We figure there's a song in there somewhere.

;o)

Yeoww! Great story.

I have O- blood which means I can donate to anyone, but only O- can donate to me. So when my Dad decided to head-on (apply directly to the forehead!) a car in the middle of bumf\*ck Indiana in 1962, and I broke the windshield with my face, they had to fly in some blood. It was probably infected with Hep C.

Fast forward 35 years. Doc sez "OMG you have Hep C antibodies!!.

Gotta do more tests but you probably have it. Not a good thing. So he does a genetic screen and there is no Hep C genetic material. None. What this means is that I had it, and beat it. It's 100% conclusive and very rare to do that.

I had to change docs a while back and the new doc goes OMG you have Hep C antibodies!! and I try to tell her that I don't have the genetic material. She smiles indulgently and tells me I am getting the test anyway because the first test must have been wrong. So, we do another genetic test. She calls me back "you don't have any genetic material!, no hep C"!!

And this is basically the sequence of events whenever I have a new doc...

The good side is that the blood bank, which used to bug me every 4 days for blood (being I can donate to anyone) and were often quite insistent (can't blame them), now run screaming from the room when I reveal that I have Hep C antibodies. They don't even CARE that I beat it and am negative. No more calls from the vampires!

Glad your partner is OK!

Deej,

What a great outcome. You couldn't pray for better. Congrats to your partner.

Don't be surprised if he has a somewhat changed outlook on things. I know that I did after surviving a horrible rollover thanks to some jack\*\*s that had to speed on a wet road and lost control of her car.

Read after me: Every day is a good day...

Very happy to hear the good news.

Take care!

Well, you could come up with a song pretty easily:

Sung to the tune of "Casey Jones" by the Grateful Dead:

Blood on my brain, feeling some pain,  
Ambulance you'd better, hit top speed,  
E.R. ahead, trouble behind,  
Doctor please be ready, to fix up my mind,

:D

That IS lucky. You should tell him to go get a milkshake because nothing will ever taste as sweet as the first one he has after that experience.

You'll be good if you just use PCI slot #4 for the Pulsar card.....  
doesn't share IRQ with anything. Get yourself a nice NVidia AGP card and  
you're there. I know you know better than to go with anything Matrox, but  
that has been proven on my rig to be a \*really\* bad choice. A surprising  
development since the old G450's played fairly nicely with the KT700 chipset  
on my old Paris A7V8X mobo. On the A8V they are the kiss of death.

Don that's amazing! Maybe you're a candidate for Hep C genetic resistance research.

I just played a benefit for a hep C organization:  
<http://www.hepc-connection.org/> - Looks like a good resource for information and support for anyone who just got the bad news.

Deej, wow, that's lucky alright! Bummer that he had to have a cerebral hemorrhage. But if you gotta have one, the ER is the place to do it.

Cheers,  
-Jamie

verse 2:

Gimme the shot I'm hurtin' a lot  
ambulance driver went and did cocaine  
stitches ahead, stitches behind  
got to call my lawyer, he'll be feelin' fine

sorry...

DC

ROTFLMFAO!!!!

Damn, dood, that was quick! And good! Gonna put that as a hidden  
"bonus track" on "Bigger Buildings"???

pab

OK.....that's it. My Tijuana bordello story doesn't even compare  
to this level of sickness. .
