I've asked about this but it was ages ago and I'm curious to check in again.

when I upgraded to v.3.9 of the UAD-1 Powered Plugins I began having problems with clicks, pops and occasional loud (REALLY LOUD!) hooting noises that scared my clients and me half to death. I tried to go back to v.3.7 but could not. UA tech support was useless - they no longer support Mac OS 9 and no one seemed interested in even trying to help. So, I've pretty much quit using the UAD-1 FX w/ Paris. Is anyone else running Paris on a Mac w/ UAD-1 v.3.9?

Yes - I'm using 3.9 on Mac OS 9.2.2

I have found most of the UAD "noise" issues centre around the Fairchild emulation, and after adjusting the plugin to the desired settings, I will "render track to disk with Native Plugins" under the Audio menu in the Editor window, and then, of course, remove the Fairchild.

While I'm auditioning it, prior to rendering, I hit the space bar rapidly to stop and re-start the transport whenever noise occurs. This seems to eliminate it.

I have the problem with the LA-2 and 1176 plugins. I don't use the f|Fairchild as often. I wonder if it's mostly compressors that are affected? I also find that hitting the space bar to stop and restart frequently stops the noise. I got tired of fooling with it. My last few projects have been UAD-1-less. I've considered switching from Mac to PC. That would make the newer UAD-1 and Waves FX available for Paris, which they are not on a Mac in OS 9.

Longshot thought from a PC guy but... is it possible that the Fairchild requires either more CPU power or RAM allocation? I know that RAM allocation is kind of a big deal in OS9 and older. Perhaps you can find a CPU/RAM usage meter of some sort for the native system that you can watch when you engage the plug in question.

Thanks Aaron-

I'll check the RAM allocation again, but I think it's
got plenty. I also am considering PC for Paris to run
under XP. I'm quite apprehensive about the switch tho,
I'm by no means a computer maestro.

Running 3.8 uad on 9.22 G4 867 single card for many years with
zero noise issues.

I tried to go back. For some reason my UAD-1 cards won't let me. UA tech
support has been no help. They no longer support OS 9.
