All,

I finally got a hold of someone at ID. I think he said his name was Adrian. He said he talked to Mike about 6 months ago. He said he took Mike's request to the president of ID but there is no plan for a PACE free version of 3.0. They are totally out of the Pro Audio software developing business and are on to Defense contracting. He sounded very frustrated with "the industry" when it comes to certain software companies that he named. Adrian said, "The developer that single handedly coded Paris is not coding anything to do with Audio Software anymore because of the his frustrations".

I asked what the next step would be for the Paris forum when it came to updating software etc . His comment was, "we can't just give you our code for Paris but we will not legally pursue anyone that tries to strip the PACE software". I know Mike wanted to get it in writing but they don't want to have anything to do with that either. So now what? Thoughts? Maybe I can call Adrian back and get the "Paris coder's" email.

Thank you

Ron
