>It shouldn't matter... see if it works. As Aaron
mentioned, the second MEC sample rate light frequently
misreads... as long as the word clock is correct it will
work fine. We have been clocking Paris et all to a
Rosendahl like this for a fair while. Word clock looped to
second MEC from the first, never had a clocking problem yet
on our 5 card 2 MEC rig.

David.

>>hey guys,

I would appreciate any helpful info that you could pass on. I built a computer for Paris about year ago and I am having some major problems with it. I really think I should probably get one built from someone that knows what their doing. Any recommendations on who I should contact would greatly be appreciated
DavidThanks Dave!!!!

ok... so now i get adat modules in mec 2 working.

digi settings now say "lock" instead of "sync". (i thought they always said "sync", my bad, doh!)

but i get an occassional pop... and spdif is not synced anymore... it goes back and forth between 48k and No Lock.

big ben shows output 2 (going to mec1) as under-terminated or not connected.

i found the meaning of the terms (lock, sync) in the manual.

i still have no led on big ben for output 2 (connected to mec1). this means
output 2 is under-terminated or not connected.

it must be under-terminated because its obviously connected!

If you are trying to clock Paris/Nuendo using the 9 pin port on the 9652, this will not work. You have to upgrade to the HDSP version for this to work properly. Ignore (remove) any 9 pin cabling.

David.

> Davidoops.....for some reason I thought I saw some spec posted by you. I'm obviously having another senior moment. Anyway, my system is as follows:

mobo: ASUS A7V8x
RAM-Corsair XMS (something or another) 514MB
2 x Matrox G450's (AGP & PCI)
3 x EDS cards
3 X IDE HD's, 1 DVD burner
2 x WD Raptors in Raid) mode.

What's your system spec and what kind of issues are you having ?

>I found that there were stability issues when simultaneously booting both DAWs receiving sync from a common clock. If I first boot my Paris DAW, open Paris, then boot my other DAW, it's far less likely to cause a trainwreck. My hardware is so spread out all over the place that booting into 48kHz mode, then changing it is such a hassle that I'd rather 'rassle with Paris occasionally than actually have to get up off my lazy ass and walk back to my machine room area. I have achieved some rather explosive results when both DAWs wouldn't lock up and got into a fistfight. Sometimes they both get really pissed, make this huge crackling noise then after a big *POP*, all my screens will completely black out and both machines will reboot into the bios. Those are such precious and memorable moments for me.

>Hey DJ,

I would have to say yes..By adding a nice summing device would do wonders for apps like Nuendo/SX and PT. It's amazing when I run stereo out to a SSL console how much this alone helps natives. Even cheaper, Soundcraft's ghost console makes for a wonderful summing mixer. Dare I say that even our mighty Paris get's enhance when routed thru one of the above mentioned devices..LAD :)

>

>FWIW the D2B came up sounding pretty average on the DAW Summing test. Of

course this is only one test under one set of conditions. I for one put it

down near the bottom of my favourite mixes. Of course much depends on which

D/A's were used, and which A/D's were used in converting back, and how they

were clocked (was the A/D picking up the sound at a moment "between" samples,

or on a sample?).

I'm interested to hear that your colleague is raving about them though. I'd

be sure to listen myself though before diving in, and do a blind A/B if possible.

The mix I heard lacked clarity through most of the range, seeming especially

unresponsive in both top and bottom end... if I remember correctly. I know it was on my least favourites in blind testing, and I was honestly expecting it to come out well above a standard Protools system.

Cheers,
Kim.

reference

monitors until I'm sure that all digital devices have shaken hands and
agreed to play nice with each other rather than come to out fighting. I
think that even with the hack to the .cfg file, the Paris system only feels
comfortable receiving sync from the computer clock via the SCSI HD cable and
having some outsider clock suddenly bugging it up the BNC with a foreign
signal really pisses it off sometimes

;o)

mixer and grew to strongly dislike it. I sort of fooled myself into liking
it at first, but reality eventually set in. The mic amps were noisy, the
EQ was strident and boomy and 120Hz hum was a problem (crappy power supply
filtering if I had to guess). Later I noted on the schematic that TL072/074
opamps were used in the EQ section, which are pretty bad opamps by today's
standard. That is some serious penny pinching going on when you have to
skimp on the opamp. With this console selling at a much lower price per
channel than the S-100, I'd be surprised if it were any good. As a reference
point, my Mackie VLZ mixer was a much better mixer than the S-100 in all
categories.

The Malcom Toft mixer on the other hand, has me very interested. From what
I read it seems to be a great bang for the buck.

:-)

I just threw the Trident in there as it seems these boards are competing
with each other.

>Hey folks,

If you're in the US, BMG label group has just released "Sounds of the Season" a country collection, with various artists from the BMG Nashville label roster, exclusively for Target stores. It's actually a pretty good Christmas record, some old, some new, with some pretty good performances. Anyway, Phil Vassar threw me a bone, and let me mix his contribution to the record, "Let's Make a Little Christmas Tonig
