See attached pic... usually I don't have to do this sort of thing, because it's normally not too difficult to place the snare mic so that you get a good snare tone, while minimizing hi-hat leakage by getting the null area of the snare mic's pickup pattern in the right spot to reject most of the direct hat sound. In this case, however, the drummer's mounting rack arrangement made that an impossibility - there was too much hi-hat in the snare mic, so... pop filter + some cardboard + some tape, and voila! :)

Thanks rick, what a horrible turn of fate he had. It's a new day, I hope we get through it.  
John
