
Subject: More geek stuff-cascading digital signals through 3 x M-Audio Digipatch units.

Posted by [Deej \[1\]](#) on Sat, 20 May 2006 09:03:41 GMT

[View Forum Message](#) <> [Reply to Message](#)

I just recabled my digital matrix. I have patched my three Digipatch units together with optical cable and I am having success passing digital signals from my RME spdif I/O which are patched into unit 3 to the Paris spdif I/O patched into unit 1.

I am not having success passing signal from my RME spdif output on unit 3 to my DAC-1 on unit 2. I have tried it using both coax and optical cable to the DAC-1. The DAC-1 works just fine on the Digipatch when receiving signals from devices that are patched into the same unit, but not across units. Sorta' strange.

Tomorrow I'm going to be trying to patch the I/O of a Mytek stereo96 ADC and a stereo96 DAC from unit 3 to unit 1 and also I will be doing the same with a Flying Cow on unit 2, trying to pass signal to the spdif I/O of a MEC on unit 1 and to the RME spdif I/O on unit 3.

I hope that this crosspatching problem I'm having with the DAC-1 doesn't somehow rear it's ugly head with the Mytek converters and the Cow. I have some pretty ambitious plans for this matrix if I can get it to work. If I can't get it to work, I may have to sell these Digipatch units off and check out the FriendChip digital patchbays. Hopefully I can squeeze just a little more usefulness out of these Digipatch units. There is a lot about them to like.

Deej

I just got the DAC-1 (on Digipatch unit #2) to accept a digital output signal over the matrix from my HDSP outputs that are patched into Digipatch unit #3.

I've also got the Mytek AD/DA on Digipatch unit #3 passing signal back and forth to the Paris spdif I/O on Digipatch Unit #1.

I have a few format converters here and there on this system, but basically, what this means is twofold:

1. Somewhat important-If I can get this working the way I want (and now I believe I can), I will have achieved digital routing aims with componentry

that cost me around \$600.00 total. A FriendChip system that would accomplish this same scenario would cost around \$2000.00

2. Very important-It is a MAJOR kludge. I mean, this is a kludge of the first magnitude. The kludgegods are smiling today..... and to top it off, it's being done with 3 x digital patchbays, which, in keeping with so much other stuff in my studio, is no longer being made.

Plus.....since it's old and discontinued, I'll bet if I A/B'ed the Digipatch units against the \$2000.00 FriendChip unit, the Digipatch would sound more *analog*

;o)

hehehe!!!! I think the kludgegods may have claimed my Behringer SRC 2496. A
small price to pay to appease them. Everything else is rockin along except
for an old Flying Cow AD/DA that I hadn't used in years and never was that
reliable in the first place. I'm going to pull it offline as it really
wasn't going to be doing much duty anyway and I was considering patching in
a different device anyway.

Hey Deej, You do remember Amy, don't you.
Do you see her anymore??? ;>p

Yeah.....she's sittin here pickin her guitar and shaking her head. I'm still getting some wierdness from the RME digital I/O when crosspatching from Digipatch Unit 3 to MEC 3 on Digipatch Unit 1. This has been a very interesting experience, but I may scale it back a bit as to the number of devices I'm patching through this thing. For whatever reason, certain devices like it fine, others are not quite so happy with it. Not everything I've got going on here is critical to the way I work and I have been successful in a few areas that really increased the functionality of the digital patching matrix. I'm going to call a truce with a couple of unhappy devices and move on.

;o)

Subject: Re: More geek stuff-cascading digital signals through 3 x M-Audio
Digipatch units.

Posted by [Deej \[1\]](#) on Sun, 21 May 2006 04:31:54 GMT

[View Forum Message](#) <> [Reply to Message](#)

Just an FYI because I know that a bunch of you guys are going to run out and
try what I have been describing. The "gotcha" that I have discovered is that
the RME HDSP inputs will not digitally lock to an incoming signal that is

crosspatched from a different Digipatch unit. It works normally on signals from devices on the same Digipatch patch unit though. It's strange because the RME HDSP output works fine sending signals crosspatched to devices on other Digipatch units.

Anyway, this situation is rocking along nicely now. I'm gonna have to get a 4th EDS card and another ADAT module to finish this beast.

Stay tuned.

;o)
