of course)? I think people here have reported it to be one of the 867 Mhz machines (not sure which one exactly), but lowendmac.com seems to indicate

Also, does it make sense to consider a fast-bus G4 coupled with an accelerator (say, Sonnet)?

Thanks,
Dale

Get the single 1.25GHz.

James

Yes, the 1.25GHz running OS9.2 works good.

I'm using a G4 with OWC 1.5ghz processor. it works great
and rendering tracks and overviews is noticeable faster
than my original 800mhz processor.
cheers,
Mike

I'm using a dual 1GHz G4 Quicksilver, but PARIS doesn't take advantage of the extra processor. Be careful of the very last OS 9 G4, I think it was a 1.25 GHz as someone here had major problems using it with PARIS (Rick?). I think they early 1.25GHz were ok.

I've been using the last dual processor 1.25 GHz G4 to run OS 9 for a few years now w/ no problems. It's nice having the dual processors when I use OS X apps like DP, PT or Peak.

I'm not sure exactly which model it was, but I remember Rick posting about an incompatibility problem with the G4 he bought and PARIS. I don't think he could ever get PARIS to run on that machine.

Hi Dale,

A good friend of mine has his G4 on eBay starting today. He's meticulous about his equipment so you can be assured that it's in excellent condition. Here's the link if you're interested:

<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=290042688421>

Have a great day!

Mark

Hey Tony! It was the 2003 G4 Firewire 800 1.42 GHz machine that was bad.
How ever a lot of people still run that machine in studios with no problems.
As they say YMMV!

That was the only G4 tower that would not run Mac OS 9.

I'm not saying it's a bad machine, just maybe not so good with PARIS.
