I have been using an ADAT fiber optic line into Paris to get 8 in benefits.

I get an annoying signal clip now and then, say every 4 -5 minutes.

Wondering if any one can suggest a cause or remedy.

I am also looking to buy the proper 8 in 8 out gear to enhance my rig and looking for file conversion utilites so files can be shared with Digital Performer and Pro Tools.

Thanks for any insights or leads.

-Craig

Hm. Couple of questions -

1) Who's the master clock? PARIS? What's the other device? Can you reassign the master device?

2) Are your digital connections all one way, or bi-directional? If the latter, are all optical cables the same length?

PS: moved the thread into "Main" to get you more eyes on a resolution. You might want to repost the "wanted" part in "Classifieds". As to the utilities - this thread will be useful, but I'd strongly recommend checking out Reaper as your general "PARIS to everything" Swiss Army Knife for a whole bunch of reasons, some still developing
