Anyone here using a macbook pro & a firewire interface? I was thinking of using this sort of setup for tracking (my G4& mecs create a lot of fan noise) I would then port the tracks over to paris for mixing. This project would be recorded through either api or demeter mic pre's (with a 1176 or dbx160x if i use a comp) then to a ua 2192 converter acting as a master clock. Thanks Eugene

Macbook Pro with Metric Halo 2882 or ULN2, depending on the I/O you need. You can record directly into the record panel of the MIO console.

For details:http://www.mhlabs.com/metric_halo/products/
