Hi Mike,

I appreciate everything you've done for us.

Anyway, I replied to Kerry's "stockFX" and asked him about the XP and HT (hyper-thread, dual/multi CPU) PSCL that you recently built. You can take a look at that if you wish and also want to make sure you don't misinterpret my post as a dig. Not at all. If I don't have to reboot in disable everytime I run Paris I will be very happy. So, in essence, Kerry said he was stable so I asked if he was in HT mode. I was also pinging the group to see who is running in HT now.

Reason: I had a crash (error message and then blue screen) and I don't know if it's something I did in the editor or if I missed something on the install/replacement of the .dll or if I just had a crash because I had a lot of windows open at the time. I am generally very stable in disable mode, but, if I'm doing heavy edits and extreme close up work even in disable mode, I save a lot, because I'm almost sure to get a crash now and then during those deep editing times. Running, mixing, playback, tracking are all stable. The crash came after about 4 hours of deep editing. Then I did another 4 hours just fine, so it may have been just a glitch. All this in HT mode.

But it did make me wonder if you've heard back from most of the group? Has everyone gone to HT mode with your updated PSCL?

See other post (Kerry's "stockFX.ini" for the following. Do I need to replace the other PSCL with no file extension in the c:\windows\system32 with one that is compatible with your updated PSCL? When I installed skunkworks XP and subsystem files several years back two PSCL's were put in the sys32 folder. One with a .dll and one with no file extension.

Again, thanks for all you've done.

Sincerely,  
Wayne  
Paris since '97

Hi Wayne,

I'm fighting like hell to get the PSCL working reliably, but alas, it isn't yet.

I just found a bunch of really sketchy code to write to registers on the EDS cards - I'm fixing it up, but it will take time. It seems like the more I dig, the more unsafe code I find. And once I fix it, I find out it isn't the unsafe code that was causing the main problem.

The latest is that the driver randomly refuses to process interrupts - the app loads, but no audio passes beyond the first buffer sent to the card, and the C16 doesn't work. I thought this was a startup issue, but it can happen at any time while using the app. It's major mystery, and I may have to look at the scherzo driver to fix it.

The best way (thought it doesn't seem to work on my quad core Phenom) is to use the original PSCL with the two pieces of software that I've posted to this message to lock the scherzo drivers and the paris app to the highest CPU.

I would love for someone to test out my pscl just to see if it works on their setup. If it works perfectly, then we can compare configs to help narrow down where the bug is. This, of course, takes time, and I understand that people are busy.

To answer the PSCL question directly, the PSCL with no file extension is the original one that ships with PARIS for windows 98. The XP minimum setup takes the ".dll" off the end and writes the updated version in the folder. Only the file with .dll at the end matters. The other one is ignored.

I'm not getting blue screens, but I have occasionally had "could not read memory" errors from two threads trying to open the debug log at the same time. You may need to restart the machine after copying the file. Windows may cache the original version, despite replacing the file on the disk.

I hope this helps. I'm working really hard to track down the cause of the main bug. It took me 3 weeks just to find any sign of code running differently when the app doesn't work right. The PSCL is huge and very complex.

To give you an example, I realized that about a third of the attempts to write to EDS registers were failing under the old code. I've got it down

to about 2%, and I think those are registers that are updated by the card, because those registers always read back different no matter what I do..then I found out that "instruments" are being loaded into the EDS registers the same way. So, I need to create a new lock and implement it in a way that won;t cause deadlocks. It just takes time.

I hope this helps, Wayne. I'm working really, really hard on this!

All the best,

Mike

Mike,

I assume you no longer eat or sleep.

How do you find time to sustain yourself?

Thanks for all your hard work!

Tom

Mike, I'll say it once more - what you're doing is insanely cool. Can I be of any assistance in beta testing with a single processor machine? Or is the information you're looking for only going to be generated by people using multiprocessor machines? I can certainly test my ADAT card with my RME 9632 although it doesn't have ADAT sync, just the lightpipe. Thinking of upgrading now though.

So far PARIS with your PSCL runs like a complete champ here, although I've not pressure-tested it with anything much larger than about twenty tracks. It will get a bigger workout as time goes on.

I was thinking of starting work on a library of presets for the DP4 Hall, Vocal Plate and Drum Plate soon, using whatever rough equivalents I have access to as a starting point - things like Logic or REAPER presets for example. I don't have a DP4 or DPPro to analyze and steal presets from - you wouldn't by any chance happen to have any conveniently packaged info on the original DP4/DPPro presets you could send when you had a minute, would you?

- Kerry
