1 card with MEC works great (98SE). Decided to complicate my life and add another card and introduce my ol' 442 in the mix. What I want to do is use card A for global effects (no limit, etc) and record to card B. Otherwords, put the MEC on Card A and the 442 on card B (with inputs and outputs.) Or the other way around (MEC on card A, 442 on B.)

I now have the MEC on card A (master), 442 on B, BNC out from MEC to in on 442. When it initializes, everything is cool, but I'm vapor locked on how to record to the 442. In the patchbay, the MEC sucks up all the inputs and the 442 will not patch across EDS cards.

How do I get the 442 inputs/outputs active so I can record? And don't laugh, I know this is probably simple for the Paris intelligentsia.

Thanks,
Kent
