View Forum Message <> Reply to Message

I don't know how many users other than Lamont and I are using Nuendo, but N4
was just released - shipping in early October:

Highlights:

* New automation system (complete automation panel): new modes include the
ability to only write from an point, leaving previous sections absent of
automation (Virgin Territory option); fill modes, preview mode, and much
more. Looks like automation is about 15x more powerful than it was before.

* New key commands for Cut head/tail, selections (great for post)

* Free routing: any group or fx to any other, plus post fader routing

* Media Bay (I hear it's enhanced from Cubase 4 and works quite well for an
FX database - also great for post)

* VST3 - all included plugins are VST3 (biggest post advantage is automatic
adapting to multichannel configs - Flux plugins already do, but now VST3
plugins and Nuendo's stock plugins will also).

* New logical editor looks much more powerful

....etc...

I'll let you guys read the rest from Steinberg if interested.

For post this is a great release - the new automation and key commands alone
are worth the $249 upgrade - free routing will be a big boost for me as
well.

Regards,
Dedric

Hi Dedric,
Crips that automation features stuff looks amazing.
I hope the freely assignable i/o-effects stuff ends up in C 4.
But hey whats up with the Expansion kit. That parts kinda silly IMHO.
If they were gonna do that then they should make the price lower I think.

Does the freely assignable routing mean that the ASIO I/O can be assigned
the same way as in Reaper?

Automation does look amazing, and word from some beta testers is that it's over the top of what
post users had asked for - instead of just giving users what they wanted, it sounds like SB decided to
blow the doors off of it in hopes of gaining more ground in post, even in large console facilities.

The expansion kit concept was rumored when Cubase 4 was released, but in a different form. The NEK
idea is to allow post-only users to forgo the score editor and some extra midi functionality, but for those of
us that do post, composing and sound design, to keep it. It's a bit odd at first glance, I agree, but after thinking
through the market, it's about as close to making sense as I think a DAW developer aiming for post and music
markets can be. While a post app really doesn't need midi at all, it's becoming useful for many areas of that market,
and for sound design/composing, of course its' crucial, but so are some post features (edit mode for scrubbing events
to picture, automation, etc), so leaving out midi features also wouldn't make sense.

Regards,
Dedric

Posted by Chris Ludwig on Mon, 24 Sep 2007 16:00:34 GMT

HI DJ,

 From the video it looks like any audio, group, fx or VST connection can
be routed to any other. Not sure if it does all the same stuff but I
beet you it i way easier to figure out how to do it. :)

Any group can send to any other group or fx (no order requirement anymore),
and any fx can assign to any group or fx.
Also, sends can now be post fader (output assignment tab now includes

groups, fx, etc). In addition we can also
route any group, fx, or buss back into an audio track for submix/mixdown.
Nuendo will also detect loop backs and disable
them. Sweet.

Imho, routing sounds like it is just as flexible as Reaper, but not as
confusing to trace as Reaper's is.

Cubase 4.1 is on the way and should include the music production features
(routing, etc) sans post features (don't know how much
of the new automation will make it into C4.1, but some might, if not all).

Regards,
Dedric

Hi Dedric,

Yes makes sense but they better be clearer on what Nuendo's base MIDI
functionality is.
I would like to see them bundle Halion, Groove Agent and Hypersonic for
free with Cubase personally to give it that "perceived value" to the end
-user thing.

I think kicking up the marketing end now with both Logic 8 and Sonar 7.

HI David,
I know they did in Cubase 4. There are now current DX plug ins being
made. Most of the old DX only plug ins either didn't well or had issues
even working on current OS versions. But that was mainly due to those
companies chose pf copy protection. From what I gather by the DX 64 bit
is that there will be a new DX plug in spec based on DX 10. But not
really sure.

Man!! Looks like Nuendo is Still the king of "WorkFlow". Those new editing features are in a league of their own..

Vista support, true 64 bit very soon.. They came to play and stay..

Man!! Looks like Nuendo is Still the king of "WorkFlow". Those new editing features are in a league of their own..

Vista support, true 64 bit very soon.. They came to play and stay..

They had to get back Direct-X too many complaints.. And, since they are working
with vista, dirct-show is back on the table.

That would be my guess - a German thing.....

.....hmmm, so what explains ProTools' office cubical grey and spreadsheet
layout? A Silicon valley programmer thing? ;-)

Iwish they made the interface "perkier" :) The very business like Gothic look
is getting old. still to this day, Paris's Gold -harware like interface is
a joy to look at.

To be fair, I'm not all that knocked out about Logic 8's interface. It must
be a German thing. :)

Well.... Paris' interface was cool, but it took up quite a bit of space that
would limit functionality in most DAWs today.
I wasn't really into the gold thing personally, but hey, it worked for
Midas. ;-) I gravitate toward blue/greys, so I'm okay with
Nuendo/C4's interfaces.

Subject: Re: Nuendo 4 released
Posted by Dedric Terry on Mon, 24 Sep 2007 20:08:46 GMT

Well.... Paris' interface was cool, but it took up quite a bit of space that
would limit functionality in most DAWs today.
I wasn't really into the gold thing personally, but hey, it worked for
Midas. ;-) I gravitate toward blue/greys, so I'm okay with
Nuendo/C4's interfaces.

Was just there seconds ago looking at this because I need to import some
Cubase SX3 and Nuendo audio into PARIS. See new thread on this for anyone
wanting to share knowledge.

Hey Dave, okay okay.. You were right..BUT, what about Yamaha's offerings for

all of this power. I'm sure they don;t want Euphonix to get all of the DAW controller glory?

Hi Lamont,
Yamaha Commercial Audio and Yamaha Pro Audio are almost completely
separate machines.
I kinda wish to some extent that CA got put in charge of Steinberg
instead of Pro Audio. At least for the Nuendo part.

Can't wait to get hold N4 to see if Vista is more then just a bad joke.

I forget which trade show it was, but at one of the ones I went to in the
go-go 90's when I was an audio writer I stopped by the E-mu booth (the Ensoniq
sale was still pretty recent) to talk to SSC and Edmund. Brian T was there
and it was all a big happy family. We all thought then that E-mu would be
a great thing for the platform, some extra cash, a little more stability
in the business relationship, a high profile name with more space in retail
stores. Things looked peachy. And Edmund walked over with some new plug-in
group's marketing stuff. It looked EXACTLY like PARIS. We were all saying,
'Damn, PARIS must be doing something right if it's getting ripped off.'

Little did we know . . .

I forget which trade show it was, but at one of the ones I went to in the
go-go 90's when I was an audio writer I stopped by the E-mu booth (the Ensoniq
sale was still pretty recent) to talk to SSC and Edmund. Brian T was there
and it was all a big happy family. We all thought then that E-mu would be
a great thing for the platform, some extra cash, a little more stability
in the business relationship, a high profile name with more space in retail
stores. Things looked peachy. And Edmund walked over with some new plug-in
group's marketing stuff. It looked EXACTLY like PARIS. We were all saying,
'Damn, PARIS must be doing something right if it's getting ripped off.'

Little did we know . . .

I hear ya. But, CA seems tobe oblivious at times. They float and out markey
site quite often. Yammy needs a third arm division and not clupm band instruments,
kazzoos, home pianos with DAW products.

I hear ya. But, CA seems tobe oblivious at times. They float and out markey
site quite often. Yammy needs a third arm division and not clupm band instruments,
kazzoos, home pianos with DAW products.

In Reaper I can take an input signal and route it simultaneously to a mono
output and to the stereo bus. That's what I want to be able to do in Cubase.

;o)

Hey DJ,

It's funny because the Roland VS boxes has nad very flexible routing since
the 1680. You can take any input,and route it all over the place.

It's possible to do this in Reaper with the click of a mouse. I've never
seen anything like the routing possibilities in that app. Of course, if
Cubase could route like Reaper, the control room function would be
redundant, plus it could be used with ASIO direct monitoring. God forbid
that something should work easily and without latency issues.

This would require "source" assignment, rather than output assignment.
  In other words, assign a source to a particular output (or multiple
outs) instead of assigning an output to a channel or send.

David.

Deej, why don't you set up various Group Channels that go to

---

whichever outputs you need them to, and send track channels to
the groups via EFX sends? This is for your outboard EFX
routing, right?

Neil

Deej, why don't you set up various Group Channels that go to
whichever outputs you need them to, and send track channels to
the groups via EFX sends? This is for your outboard EFX
routing, right?

Back when I was selling Paris some people expressed these same thoughts,
especially if they came from Cubase or Logic. I would try to get potential
customers to look at that non hardware demo and they would get turned off
by the color and the look. I got asked if it had skins here and there.
Some loved it and some thought it was yuk.

By the way, I'm glad we're on to different subjects.

As I basically said recently, I think the 64bit thing will happen in time
and everybody will be doing it. I also think that most of the objections
to Vista for audio will be resolved in time also.

I sold Paris for a while as well (did you ever work with Eddie Fritz?) -
same responses. In some ways I liked it, but in others,
not my favorite - still beat the pants off of ProTools interface - and more
graphically creative than anything at the time.

Did you (or anyone else) ever see Mantis? Brian T had it running at his
place as a patch bay - iirc, it was a somewhat similar interface, but I
think in the blue-grey color scheme - pretty darn high tech and cool looking
at the time, imho. It also looked like it would have been Paris on
steroids. Aaron probably knows of it.

Headphone mix. I want to route individual mono inputs to mono and stereo outs simultaneously using ASIO direct monitoring without having to jack around with Totalmix or the Cubase 4 Control room funchtio (which doesn't work with ADM).

Yup, I do. That Mantis was phenom man, total recall like the Paris Patchbay, only in Adat land.
G'luck talking BT out of that, heh.. I think he said there were very few made of them.

AA

Ah, I see... well, you know what you really need, then? One of
these:

http://mercenary.com/toaudeatbbch.html

http://www.sweetwater.com/store/detail/ATB16/

What????.......no fader automation??? No built in bus compressor????

I hear Chandler is coming out with a new console. Probably shouldn't cost
more than $200k....but maybe that's for just 16 channels.

;o)

Kevin M. told me that they showed the mantis under a glass case at one of
the shows. The concept with the ethernet was then stolen by Roland and showed
up in the VM 7200 mixer product according to Kevin M. Kevin tried and tried
to get EMU to move forward on Mantis, but it, like many things was left to
wither on the vine and die. Kevin said that the technology behind mantis
was vary promising.

Does anybody remember the Ensoniq analog mixer from around 1996? I think
it was supposed to have some digital outs, something like the Mackie Onyx.
 It was 16ch and modular, I always wondered if it was supposed to be the
front end for Paris???
