Hi all,

Been out humping a couple of new systems into place, so I haven't been around much.

Got a new 8-core Mac Pro shipping. The pore ole Mini here has had about enough of me and how hard I work it...

Anyway, I have discovered that the way to buy Apple computers is to get your own RAM. (I use Crucial) and your own monitor. (not the terrific but silly-expensive Apple ones). I got 6G of RAM for half the price of 4G from Apple. Crazy... and a 24" Sceptre DVI monitor for 299.

Macs are almost affordable if you pay attention to the details...

The 8-core with all that RAM and a couple of good drives will serve me well if I have to leave PARIS, but I will resist as long as I can.

HEY! Where's our update!

I know... coming soon...

Also, for buying the Mac I got a free iPod Touch for my wife. Pretty impressive I must say with built in WiFi.

Kind of an iPhone w/o the phone. It also plays my full uncompressed wav files just like my Classic and sounds fab. Very cool little box.

Hope everything is well with you all.

DC
