I failed to mention on my other post below that everytime that I launch paris
this error comes up(application has failed to start because mfc71.dll was
not found, re-intalling app might fix) re-installing many times did not fix.
I can click on the ok button and paris however does continue and load. Just
wondering if this is the cultprit on the other problems I am having. Sometimes
upon launching paris error init paris engine comes says no interface connected
to master card. I can relaunch and it will launch 5-6 times without the no
interface error appearing.thanks david
