Aaron,

I hear you too.
It is just a tool and I have no problem using it.

The problem I have is many clients who can't
sing expect the correction to be done in the studio.
Okay I'll do that but the pretense is lame.
This is with often times talentless projects
and no song writing. That's painful.

I guess it depends where you are in the food chain.

You can be blessed and get an artist in that doesn't need it, or you can work your magic on someone who otherwise would suck so loudly it would sound like a Dyson commercial, and make them tolerable. In the 2nd scenario, you are the real artist. Either way, it's still just a tool. Pause for a moment, step outside your own processes and just consider the whole picture bro. What's it mean to the listener, to the 'artist'?

Charles Koch, Koch Industries Chairman and CEO
"Our vision controls the way we think and, therefore, the way we act...The vision we have of our jobs determines what we do and the opportunities we see or don't see."

it's been my experience...more often than not that if the singer sucks, the rest of the music usually also does. i know, i know it's money but i miss the days when people with talent and a drive to be their best was the norm.

I'm not sure what you mean by "erector set music"? Do you mean assembling a song by & large piece by piece, track by track, as opposed to recording a whole performance by the band all at once?

If so, I rather enjoy that - I think it allows the recordist to get more involved in the process with regard to massaging the composition & arrangement. But then, that's my favorite part of the recording process, anyway.

I think, if I may, that Gannt might be referring to lifeless, sterile, electronically purified music.

Can't sing to save your life, but you're cute as a bug's ear? Don't worry, technology can make you a star anyway! (Provided you can learn a few simple dance moves.)

Maybe there should be disclaimers on auto-tuned projects: "Certain performances contained herein may be electronically enhanced -- the artist makes no guarantee regarding the quality of live renditions."

Is it possible to autotune an entire mix? Because I've often wondered what it would sound like to take some great classic rock songs and "tune" them. What if you autotuned some Beatles, or Bob Dylan, or Led Zeppelin, or the Band? Would they sound better? Or geez, what about the Stones? They'd be unrecognizable.

Bah. Humbug. I prefer music.

I read an interview in Tape Op magazine with some famous old recording engineer/producer - I can't remember who - and he talked about why he likes recording live as much as possible. He talked about the concept of GETTING IT RIGHT as opposed to figuring you can fix it all later and that got me thinking. In the old days I was really involved with the tracking process in a very musical way. I was constantly asking myself questions like this: Is it in tune?

Is it in time? Are they in the pocket? Can it be better? Do they have one more take in them? Nowadays, the question I ask myself (and the question the clients inevitably ask) is: Can I fix it later? Do I have enough tracks to piece something useable together? Is there too much vibrato to be able to use Autotune? So, the KIND of attention I pay is very different. AND the AMOUNT of attention I pay, as a result, has suffered. It's a very different mind-set to be planning on doing my best to turn the sow's ear into a silk purse later than to be trying to avoid the stinky old pig in the first place.

Do you know what I mean? And people expect me to fix everything. And what I'd really want to say is "Go home and practice. Call me when you play your instrument well enough to be worth recording. Call me when you learn how to sing in tune. Call me when you get a drummer who can actually keep time.

But I can't - I need the money, so I fix and tweak and tune. Sometimes it's fun - I like making a great vocal take with one or two funky notes sound better. I love being able to edit a great solo from take two of a jazz tune into take 5. I don't mind sliding a bass note to match the rest of the band in an otherwise great take of a jazz tune or rhythm track.

Oops. This has become a Rant. I'll stop for now!

You know, I don't mind using technology to create music from the ground up.

I don't like most of the computerized, drum machined, autotuned (SHEESH! That's a fad that could end soon!) quantized stuff I hear on the radio, but I've fooled with some fun noises using samples and synths. Sometimes it actually sounds like music. Sometimes it even has a little bit of feeling to it. What I object to is being expected to happily participate in fooling people into thinking that the sow's ear really IS a silk purse. It totally trivializes the 40+ years I've spent learning to play the guitar. It totally trivializes the accomplishments of all the singers and players I've idolized and emulated in my career.

You're right. Erector sets are awesome (as are Lincoln Logs, Aaron...)
I need a new analogy. Give me a minute...

Just keep lego out of it, I grew up on that stuff..

Cheers,

TC
