I listed this as an alpha because as far as supporting PARIS OMF files, that seems about right. It opens some PARIS OMFs, omitting track names/region names/framerate/tempo. I wouldn't call it *useful* right now, but it's certainly intriguing, and more exploration is coming. See this thread - <http://forum.cockos.com/showthread.php?t=24943> - for details (starts around post 121)
