
Subject: Alesis Matica 900 power amp and temporarily driving a pair of NS10's with a consumer amp

I'm waiting on a power amp to show up from my NS10M's. I tried a number of amps that I had access to in this area and the one I like best wasn't one of the Yamaha amps. It was, surprisingly (I guess) an Alesis Matica 900.....very open, clean and detailed sounding with 270WPC.....so anyway, I found one and that's what's going to show up here next week to power these things. Maybe I'll change my mind, but that one seemed the best sounding of the bunch to my ears. In the meantime I want to use them so I hooked them up to a consumer grade Sony amp that is very clean and rated 230W / impedance use 6-16 ohms. That's pretty broad and the NS10M's are 8ohm IIRC, so I oughta' be good if I don't try to drive these puppies too hard.....right?

Deej

It will be fine.

BTW, if you want an Adcom (they're very nice) let me know.

We're dealers.

Your consumer amp is fine. Feel free to crank it up hard and use your ears to listen for distortion. If you hear it distort back off. Consumer amps rock.

Don,

I have an ADCom GFA-1 here. It's ollllldddd and doesn't have nearly the fidelity fo the Matica 900.....but thaty's probably because it's oooollllldddddd and the caps are likely dried out. It's going to be a science project I think and once I get it right, I'll likely use it with a crossover to biamp my ADS 1530's down in my listening room. If I start getting unhappy with the Matica 900, I may consider another Adcom. I like them too. I also liked the Yamaha P2210 (I think that's what it was.....the one that John Macy reccommended), but the one I had here wasn't quite as much to my liking as the Matica 900. It could have been for a number of reasons having to do with the age/integrity of either/both of the amps since theses aren't exactly spring chickens. My resources here are pretty limited as to what I have available to demo, but I'll keep moving down this path until I'm satisfied with *something*. I've got a KRK RP 10S powered subwoofer here that I'm integrating into the NS10M reference scenario. This, along with my NHT A/20/B-20 reference system ought to give me a bit more flexibility than I have now. The NS10M's definitely do make things easier to translate a mix to a car stereo.
