I failed to mention on my other post below that everytime that I launch paris this error comes up(application has failed to start because mfc71.dll was not found, re-intalling app might fix) re-installing many times did not fix. I can click on the ok button and paris however does continue and load. Just wondering if this is the cultprit on the other problems I am having. Sometimes upon launching paris error init paris engine comes says no interface connected to master card. I can relaunch and it will launch 5-6 times without the no interface error appearing.thanks david
