First time using Wavelab, and first time I've run into this problem. I bounced a project (16bit) to a wav and sent it over lan to another computer to edit in Wavelab. After I finished I sent it back to Paris. When I pull it into Paris, it shows up as a 3K file??? Dragging it on the PField yields zilch. The stereo file from WL is over 45K and plays fine in MediaPlayer. What gives???

---

in wavelab you need to search around for a setting that says  
"save file headers" or something to that effect.  
Uncheck it. Disable it.  
Then resave the file.  
You should be good to go.
