Same as 2.2

It's on the global master fader. Bottom left button.

I only see a button that says 'sub on' on the master fader, and it seems clicked in, not sure how to initiate the bouncing procedure.

Press G to open the master mixer. Scroll to the rightmost strip, the only one whose three bottom buttons are labelled "D", "A" and "E". The "D" is the bounce-to-disk button.
