 different story... you'd be OK, I believe, from

> NeilHeh. 13 years ago, when I was still playing with bands I used
one to send midi to stagebox and then with snake to MIX engineer
so I was changing presets in his FX rack for each song, all along
with programs on my keyboards and PAD presets for drummer.

That was cool for early 90's! Espetially in Croatia in the middle of WAR!

But, I made it myself.
It's very simple. Just solder an XLR to MIDI.
You can take an high quality shielded MIDI cable and cut it in the middle,
and then solder an male and female XLRs.

New paris hardware design. That is funny.

Kent

well.

By that logic, I've been an in-home elder care provider for years, until
the job disappeared, and now I'm a heir. Art and music haven't paid my rent
entirely probably for a decade. But I prefer to think of myself as an artist/musician.
Pride on my part.

As to those pesky computer things, I love 'em all. I'm typing on my old second-hand,
internet-virus-proof iMac, which works just swell. Beside me is my handmade
XP machine, which hums along swimmingly on two monitors. The G4 is waiting
for me to finally get my act together and install Paris in it. When will
it happen? Who knows? So many things seem to intrude.
