I've been using the same pair of Yamaha 15" cabs for many years, but they're just too damn heavy. I have plastic envy. Have any of you guys done comparisons of wood cabs and plastic ones like the Eons?

I'm considering a wide range of brands, including some Carvins that are about half what the others cost. Any preferences?

I don't believe I've heard any Carvin PA speakers, but I've heard a couple or three different bass cabs of theirs & I thought they sounded pretty good! If their PA speakers are of similar construction, I'd be willing to bet they don't totally suck... can you still get them loaded with different driver options?

Hi Bill,

I used a low end two way Carvin for years that was pretty good and like you say less expensive. Blew the 1/2 throat drivers on the horns once or twice. I now own SRM 450 Mackies=
<http://www.mackie.com/products/srm450/index.html>
that have a better sounding horn than the EONs for my money. The EON's = horn always hurts the whole system's sound. EQ doesn't remedy their problem = to my ear. The Mackie is shy in the bass but EQ is your friend. If I'm planning on slamming them in big rooms I carry a JBL MRX 518 http://www.thomann.de/gb/jbl_mrx_518_s.htm?partner_id=3D73572 and power it with one side of a Crown XTI 4000. = http://www.crownaudio.com/amp_hm/xti.htm That makes big tight bass and power for a second cab. The Crown weighs = 18lbs and puts out 1200 watts/side @ 4 ohms. Serious grunt. The MRX 518 olds the = Mackie with a pole too. It isn't too heavy but bulky. One is enough for all of my indoor = venues. Two for outdoor with another=
larger top end rather than the Mackies.

I haven't heard Carvin PA stuff in decades. It might still be the best = low \$ deal. The Mackies are light (37lbs) and powered. Running an AC line to them = can be a hasslehoff but not as bad as 75lbs is per cab and an old power amp.

Listen to the stuff if you can. The give away for me is the = horns/crossover. I've found bottom end easier to dial in than a sweet top with less than perfect = cabs which is what we're talking about here. Remember at indoor venues the bass/low mids = coming off the back of those=
cabs carrying down the backstage wall can have dire consequences with = multiple open mics.

I hope this helps a little.

DC,

Those look pretty snazzy. A little heavy but I'll bet they are smooth. Well, they look smooth anyway. I considered using my Genelec 1037s live too. A little too heavy but not too big. They would do some nice work for a small PA.

The multi trip, weight thing with no roadie and doubles on the weekend =
got me out=20
of moving my 3 way EAWs (88lbs on tripods) (Extra Added Weight) and 2 x =
900 watt=20
@ 8 ohm power amps in the 90s.
The One Man Band - Rodie - Gear Slut=20

"DC" <dc@spammersinhell.com> wrote in message news:47621de5\$1@linux...

Both the Eon and the Mackie are decent and can sound good with=20
a bit of massaging.

These, however

<http://www.tannoy-speakers.com/s.php?product=3D39&title=3DV12&s=3D1>

Will positively murder either one.

Studio grade sound, great projection, clear as a bell, sweet and =
really
powerful. There is a version with a built in amp as well.

More money of course, but if you are playing out, and really want to sound phenomenal, there is nothing out there as good. And, because they are dual-concentric (horn fires through the center of the woofer) they are very compact. We install these all over the western states.

DC

Both the Eon and the Mackie are decent and can sound good with a bit of massaging.

These, however

<http://www.tannoy-speakers.com/s.php?product=39&title=V1 2&s=1>

Will positively murder either one.

Studio grade sound, great projection, clear as a bell, sweet and really powerful. There is a version with a built in amp as well.

More money of course, but if you are playing out, and really want to sound phenomenal, there is nothing out there as good. And, because they are dual-concentric (horn fires through the center of the woofer) they are very compact. We install these all over the western states.

Wood will always sound better than plastic. Depending on your budget and SPL requirements, for passive boxes, check out the JBL MRX series. The new JBL's are quite light weight and good sounding. The SRX is better but more expensive. I am not a huge fan of powered speakers, too many compromises. Oh, and as someone who repairs speakers as part of my living, I would say avoid the EONs... If you MUST have powered plastic boxes get these:

<http://www.electrovoice.com/products/211.html>

German built power and an up-sized compression driver. They sound and work great.

David.

They are EV made drivers, and the housing is a modified SX300 case.
Standard stuff... DL12 derivative on the bottom and DH2T on the top.
The Dynacord amp module puts out 350/150W. The net weight of the box is
36 LBS.

They are quite good... all our rental customers prefer them over the
EON15G2's we also have in rental (and I don't have to fix them!). For
those that aren't aware, I have attached a photo of the amp board from
an EON... that's all there is... :-)

David.

One thing to consider... in the last 3-4 years, Mackie has moved manufacturing to China. This means that the RCF drivers and Italian amp module that were once used in the '450 have been replaced with Chinese counterparts that are of lesser quality... I know, I used to fix those as well... (no longer sell or service Mackie products)

David.

Oh, and the two SK-3 bulbs are only in the EON passive speaker system...
but yes, they light up pretty good! :-P

I wondered about the weight thing. The Mackie SRM 450 actually weighs about 1 lbs. more than the powered version of the V12 (known as the Power V12), they are both about 50 lbs.

The V12 , BTW, is a totally different product than the studio monitor line and will cover large amounts of people, even outdoors where studio monitors will not. I once did a brass quintet with a pair of them, a Mackie 1202, an amp, and a pair of KM84's. Sounded like a CD, and it was outdoors for 700 people. Their only drawback is the price... The street price for the passive V12's is 3K a pair, and the powered are about 4600 a pair. You can get a pair of SRM450's for about 1400 or less.

Hah! No, just T-Shirt... There is no comparison though. With EQ, without EQ, V12's just slaughter Eons or SRM450's.

They should for the money...

We sell all three BTW.

for my money, nothing beats the mackies. I have used them for both bands, radio remotes, and DJing... they sound really great, and not harsh. if you need a little more "umph" the mackie sub is also a great piece and integrates very well sonically.

on the other hand... if you want your speakers to be part of the light show... get the Eons and push them REALLY hard. they have a light bulb that acts as a capacitor so you don't blow the drivers when you crank 'em. its actually pretty fun to watch in a dark room.....

I'm still using an ancient EV "Entertainer" system for solo gigs (powered mixer and 12" 2-way speakers, at about 35lb each). It still sounds decent and it won't die. Good stuff. So for my next system I will definitely consider the new EVs you suggest.

I have considered getting a Bose L1 system (played through a couple and they work well for some kinds of gigs) but it weighs about the same as the EV system, is about as time consuming to set up, doesn't include a real mixer and is mono only. The new Bose L2 has a slightly lighter tower base component but is more expensive and offers less inputs unless you buy the add-on FX/remote.

Another new "plastic box" system I've seen recently: Peavy has some inexpensive 2-way powered 10s, 12s and 15s that are remarkably light, and non-powered version that are even lighter. Can't comment on the sound but some reviewers have claimed they are as good or better than the JBLs and Mackies. Dunno.

Cheers,
-Jamie

LOL!, yah, we have some of the black face and the later grey face Entertainer mixers here... most are dead. Great little rig for the day though. The S100 tweeter diaphragms are still available, but they discontinued the foam surround cones for the woofers (although we still have a couple). If you ever need to get them re-coned, you will have to use a Force 12 kit.

David.

yes, that was a bad move IMO. We had several DOA Mackie mixers after the move, and are now using mostly Allen & Heath.

Mackie management fired 200 people, closed the WA plant, and, using the brand recognition, made knock-offs of their own gear and pocketed millions...

The company that actually made the Mackie SRMs is Italian and they currently sell their own line called RTF. So if you are looking for the old Mackies go for those.

The original owner of RCF, Arturo Vicari (sp?), the maker of the first SRM450, started a new company a while back:

http://www.dbtechnologies.com/mod_neues.cfm?CFID=2732984& ;CFTOKEN=32416958

They also recently bought RCF back from Loud (who was being sued by the Italian government for labour violations)

The Opera 405 is basically a '450 in a different box.

Don and David,

I recently replaced an RCF woofer that was blown (the first problem ever after around 7 years full time) and the Chinese replacement woofer = sounds=20 very close to the 7 year old RCF. I was lucky enough to have the RCF = reconed with original components that were purchased before Mackie screwed the = pooch=20 on those guys. That one sits in a box waiting for it's day. The RCF = recone was as expensive as the replacement Chinese woofer. We'll see if the Chinese = model lasts with the punishment I give it. It's probably seen 50 performances = without a problem so far.

The one thing that surprises me is that the plastic Mackie cab does not = rattle or buzz after all this abuse. I figured that would be the first thing = to go. It isn't as pretty as I'd like and I'm not sure how to remove the scuffs. Any = ideas on that?

Are you guessing or have you tried it?

Sounds like it might be the ticket though.

Guessing. Try it somewhere it won't show first.

I don't even know what you're talking about, but I'm gonna say "Meguiar's Car Wax" (the one in the red bottle). I've used that to remove scuffs from all kinds of shit, INCLUDING guitar finishes - works great on that!

If it were non-toxic, I'd use it on my teeth.

(heyyyyy, maybe it IS non-toxic - haven't tried it yet! lol)

Stay away from the sx300, the horns blow out like a candle in a fan factory. I worked with a guy that got about 6 shows out of 4 of them, and the horns were all dead by the beginning of the 7th show. We had to pinch hit with a pair of SP series Peaveys, unhappily.

I will have to disagree with you on this one... The 7 piece R&B band (live horns) I do sound for has a pair of T52's for top end. These use the same 81514XX diaphragms that all their stage boxes having 1" drivers use. For 10 years, I have been powering these 2 boxes with 1/2 of a Crown Vz3600... that's 800W clean per box on a cab rated for 400W. I run that amp right up to ODEP kicking in on a REGULAR basis, and I have only taken out 3 diaphragms in all that time. Even with large chunks of the titanium missing, they STILL produce high end!

I think your friend should look at how he is powering the 300's.... ;-)

David.
