
Subject: OK.....I'm getting ready to tweak the DAW.....YO!!

Posted by [Deej \[1\]](#) on Mon, 16 Jan 2006 19:22:46 GMT

[View Forum Message](#) <> [Reply to Message](#)

Well.....after a couple of weeks of ordering VSTis' registering them and burning in my new DAW, I'm getting ready to go in and optimize the OS and turn off all nonessential services.

One wierdness about all of this is that windows will only *see* 3.14+-G of RAM, even though I have 4G installed.

Jorsi posted up a tweak to allow more RAM to be accessed. I'm thinking that this tweak will need to be done for the .exe files of Cubase SX as well as all other .exe files (my VSTi's in particular) if I want them to be able to access as much available RAM as possible.

Also, in the instructions I was provided, there are a bunch of quotation marks in the command lines, as follows:

1. Download masm32 (<http://www.masm32.com/>) and install it (after it installs, it brings up a command prompt window, just close it. Do NOT have it perform any of those functions.)
2. Copy the Nuendo3.exe to another location for backup purposes
3. Place another copy of Nuendo3.exe (or whichever sequencer you use) in the C:\masm32\bin directory
4. Open up your command prompt and type "cd c:\masm32\bin"
5. Type "editbin /largeaddressaware Nuendo3.exe"
6. Move the copy of the Nuendo3.exe file you just modified back to the regular Nuendo directory
7. Open your boot.ini file (located in C: - you may have to open any folder and go Tools->Folder Options->View->Select Show Hidden Files and Folders and UNcheck the "Hide protected operating system files" to see this file)
8. Add "/3GB" after "multi(0)disk(0)rdisk(0)partition(2)\WINDOWS..." so it should look like similar to
"multi(0)disk(0)rdisk(0)partition(1)\WINDOWS="Microsoft Windows XP Professional" /3GB /fastdetect...."
9. If you have a UAD-1 card, you also need to add "/Userva=2900" after the /3GB switch, so it should look like similar to
"multi(0)disk(0)rdisk(0)partition(1)\WINDOWS="Microsoft Windows XP Professional" /3GB /Userva=2900 /fastdetect...."
10. Save the modified boot.ini file
11. Reboot

I'm assuming that the quotation marks are part of the command line at this point and not just an emphasis as to exactly what to type (sans the quotation marks)

Prepare yourselves for occasional whining, grnashing of garments, rending of

teeth.....etc.

;o)

DOH.....I just noticed the trailers followed by the quotation mark (...") after the command lines he specified so it looks like the quotation marks were meant for emphasis after all.

Guess I'll see soon enough. Working/stable version of OS is now Ghosted.....time to go **** it up.

Wish me luck,
;o)

Actually, there are quotation marks in the command line of the windows boot.ini file, but it's easy now to see wht should and shouldn't be edited.

Thanks,

Deej

Ghosting tweaked system now. Now that I'm done, what else can I think of to
fiddle around with???.....hmmm.....welll.....I do have a mix to
finish (sitgh)

;o)

If I didn't know any better DeeJ I'd say you prefer tweaking your rig to
mixing on it

No need to know any better - we all know he DOES prefer the
tweaking part!

:D

Neil

P.S. Also, BTW... who here was asking me for a Voxengo Voxformer preset a few days ago? I lost the thread to that before I had a chance to send the preset file.
