Hello people... the C -16 was working well when I first got it.. didn't
use it for a while.. reconnected it again.. it lit all leds and did nothing..
didn't move or function at all.. then it stopped the Paris from working
so I had to reinstall the Paris Pro 3 ... then reconnecting the C-16   no
leds even lit anymore..   did it fry ?   any suggestions ?

        Thanks alot in advance..
p.s :   I am using aABIT AV8 3Rd eye MOBO   with an Athlon AMD +3500 64
bit Processor with 4 EDS-1000 cards (working on SBS Chassis expansion)
 and MEC (Black)
