I have seen this topic come up a few times on the internet however I have only come across dead links. Does anyone have a lead or could anyone point me in the direction of some kind of patch or 105/ scherzo that might allow me to run PARIS on XP I have PARIS 2.2. I believe I have a license for 3.0 but have yet to install until I can resolve this to the infinitely more stable XP. Win 98 is simply a drain on my patience.

Thank you,
Andrew
