Hi,

is there someone using the MEC SMPTE module for synchronizing video or older machines to Paris?

What's its use for? What services to clients can do this unit?

Any examples to make a bit of extra-money by it?

Years ago i bought one on E-bay just to complete my Paris rig, i also have its manual, but i don't have any idea of that "alien" object.

Thanks all

Mike did some work on the smpte.dll last year and fixed some of the issues in it. Check out this post.
