I always try to store my old reel to reel tapes tails out, to help print-through. Should I do the same with a cassette tape? I have a few old 4-track masters I want to save. They still sound amazingly good at high speed with dbx..

Hi Zan,

Half track tapes only play in one direction so storing them tails out (hopefully) keeps print-thru buried in the music. Cassettes are quarter-track and play in both directions so I don't tails out probably won't make a difference.

Four-track cassettes, however, also play in just one direction, so yeah, tails-out is still a good idea there.

As in Tascam Porta Studio... Yes. You're exactly right.

Yep, or the Yammy MT-44's, etc.

Why not transfer them to Patis, or whatever, whilst the transport in your machine is still working. Trust me... there will come a time when it won't.

.....but you probably have already done that.  
Scrap that... it was a stupid suggestion.

Thanks..they are recorded on one side only...I have tranferred most of them to digital...I'll just fast-forward them to the end of the side...just curious,never thought of that scenario...

Lord does this take me back. After my 3340 days, I had a Tascam 234 cassette multitrack. It never had a software failure or needed updates.....

Fast forward could lead to edge damage. Play all the way through, tails out.
