Man, I remember for years nobody had the drum split feature in sequencers like Dr T's.

What a throwback!

I have my Amiga 2000 with Dr. T's KCS Level 2 sitting right beside the =  
Dual Core=20

Cubase 4 in my studio. It's on it's last hurrah as I upload the last of =  
my MIDI sequences=20

into the new guy in town. Those Roland samplers are close to dead =  
weight now too.

It'll be a tearful goodbye.

T.

I remember chuck posing up Cakewalk v1 or something like that back around 1999 when Parisites were starting to try to figure out how to get it to lock with a sequencer. My first sequencer was a Boss DR5. I think I've still got Cakewalk n3 around here somewhere.

Yeah, memories... Not sure whether I want to remember these or forget them...

For me, it was a combination of Cakewalk (for DOS. hmm, was it version 2, or 3?) and a Yamaha QY-10 for sequencing. I also used a bunch of academic software like Ravel and, hmmm, whatever the predecessor to KeyKit was. I wasn't really happy with any of them, so somewhere around 1995 I wrote my own... "DIME" - Doug's Integrated Music Environment. (How lame was that...!) IIRC, I was using Python 1 under FreeBSD 2 with a PAiA MIDI interface that I had soldered together...

Doug (where's my cane?)

Can't find any pictures, but I learned with Passport's Master Tracks on an Apple IIe circa 1984/5. I was one of the few in Iowa who knew anything about sequencing at that time and even had vanity plates that said MIDI 1. What a dork! :>P

My first sequencer was a rock and stick. The stick was a little buggy  
but the rock was solid.

Cheers,

Wow, now I feel R E A L L Y old. I'm looking at Cakewalk pro 4.0 on this guy's list and I still have a copy of 3.0.1. Hell, I was using 3.x before it was called "Cakewalk".... anyone remember Twelvetone Systems? Speaking of Twelve, I have a copy of that and it's big brother, Pro24. Anybody here wanna guess who made these two products and join me later for beers and then an official valuation on Antique Road Show later on?

WMW

Here's mine, a Roland MC 500. Ran it until I went on to Mastertracks Pro. I actually replaced the main board to upgrade it to a MarkII. It still works flawlessly. The funny thing is it boots off of floppy and is ready to rock faster than I can boot up my core2 duo and get SX running.

:~)

Steinberg's first 2 sequencers for Atari. One was 12 tracks, the other 24,  
as the names imply.

WMW

I started with an Ensoniq ESQ-1 (onboard sequencer) that shorted out the day before delivering a short soundtrack for a media presentation - luckily we had time to track it live that afternoon....

....then to an MC500  
....then Cakewalk 3.0 on a 66MHz laptop - yep, those weren't the days. ;-)

The MC500 rocked, but the floppies scared me when playing out - always carried 2 or 3 backups, except for the gig where I forgot the backups and the main disk failed (the only gig a disk ever failed, of course) - luckily the gig was only a few miles from the studio.

Dedric

My first setup was the Kord Sequencer with the weird mini disc. Played my Roland 707 drum machine, Korg DW8000 and Roland Juno 60 with added midi interface.

Then went to Dr Ts and Cubase on my Atari.

Then moved to the almight powerful 286 PC with a MidiQuest card and used Voyetra and Master Tracks.

Finally full circle back to Cubase VST and currently running Cubase 4.

Hey Bill !!,

Aww the Lin 9000..The machine tha started it all to the MPC. It's a toss up. I had DT on the Atari 1040st adn it rreally synced well, But, the Linn9000 was and still is a beast..
