Ok, most interesting.

Here is a pic of one of the monitors on a good stand, (Chicago Speaker Stands, lead shot filled / MoPad) and it's associated 1/3 octave FFT spectrum analysis response. (The subwoofer is off for both tests)

As you can see, this is very good response in any real-world situation. You have to spend huge sums to beat this response by much.

See the next post for what happens when you put the speaker on a desk.

DC
