Have you tried opening them up as raw files in Wavelab? If you know your sampling rate and bit depth, you can put that in and tell it that it's in Motorola format. Wavelab should be able to open it up, and then you can save it as a WAV file and get to work.

davidstay tuned.....bitching and whining to be announced.Have you tried to clean the DVD? Sometimes I get CD's or DVD's that I have problems to read/copy from, so I buied a Disc Restore system some years ago, to take care of that. Have saved over 90% of problems with discs with it.

I tried putting the original drive back in but the problem is still there.

Both CD and DVD drives cause the error now.

Everything else works. I think I could run 4 hard drives with no problem.

>The RNC is a great little box for the bucks. If you're talking about tracking  
  
thru compressors, I'd say this: I frequently (but not always) track vocals,  
bass, guitars and horns thru compressors, usually dbx 160X for vocs, UREI  
LA-4's for guitars and bass (although the 160X is nice for them too) and horns,  
  
then RNC (I have 3 of 'em). I never track drums thru compressors! Nor do I  
ever gate drums. I would always rather have the un-compressed drum tracks  
first, then compress as needed after. In fact, I frequently don't compress  
drums, even in the mix...

Just my .02 worth.

Will it come up in safe mode with either optical drive installed? That could help narrow down the field on where the problem exists.

Perhaps there will be minimal wailing, gnashing of teeth, rending of garments.....etc.....but then again.....what would a DAW build be without at least one major catastrophe? I have a feeling I know exactly at wht stage of this it will happen, but I'm keeping it secret until I know for sure.

.

If Apple can deliver a dual core laptop at a reasonable price, and if the major production software is updated quickly, then it could be an amazing system.

Just have to wait and see...

Cheers,

-Jamie
