Richard, the ASIO driver is for using the PARIS hardware within different software.

So you will be able to bounce the PARIS mix, import it into say Wavelab for mastering or record into PARIS then bounce the wav's into Reaper and use modern plugs, then import back into PARIS for mixing, all using the MEC playing the audio into your speakers.

My current workflow has me producing in Studio One V3 or Live 9, record in PARIS, premix in Reaper with Nebula, then mix in PARIS or Studio One, and master in Wavelab all using the PARIS MEC!

Mike is a mad genius, we are lucky to have him!
