Hey Mike,

I could have used a click a million times so far. Syncing up cubase for a simple click is an extra effort I try to avoid. Will this trigger on board sound(s) paf or wav I hope? I'm a sidestick kind of click guy and not the cubase sign wave annoying beep. Less steps are a good thing for me.

Great idea!
Tom

I'd use it if it had 2 things:

Locks to/matches grid
Able to map tempo changes (IE, bars 1 - 32 @ 96bpm, bars 33-56 @ 107 bpm,
etc...)

Is that doable?

Tom, you can assign cubase to play any sound you want for the click, under
"metronome" .

I find the click very easy to set up in Paris. set the project tempo, then
control C, control L, type in 600 or whatever, and hit enter. (I have a click
sample sitting on track 16, beat 1 of my default ppj.

Yeah, I'm with Aaron on that one.

Hi Tom,

I was thinking of the sinewav beep for now, just because I'd have to figure

out how to load a wav file in via a text file, plus I'm not sure how the circular arrays would work with that. But, it might be possible.

Would a beep be unacceptable?

Hi Rod,

I agree that that works ok. I think it is off in 44.1, though. The PARIS app doesn't adjust the bars and beats for 44.1 as far as I can tell. I could be wrong, though.

All the best,

Mike

Hi Aaron,

It would match the grid at 48k with no tempo changes only. I can't change the PARIS app, unfortunately.

But, I could code, say, four regions that you could define tempos for. I think that's a cool idea.

I'm pretty sure it does. I've been using it that way at 44.1 for years now, working on projects from other people, done in other apps, and the bpm info they give me always lines up.

Rod,

That's sounds easy as pie man. I wish I new about it seven years ago. I'll give it a whirl. Makes sense now that I think about it. Never used Control L before.

Mike,

The beep sound is abrasive to me and certainly disconcerting to classical and most acoustic players. The idea of getting four tempo choices is very cool though.

If this isn't a boat load of work I'd say do it. I'm good for it. Try for a sample based click if possible.

I really think it's quicker that pulling up the metromone plug in protocols.
Just get your sample of one click edited real tight, and put it on whatever
track you want at the very beggining of your default ppj. If you decide you
don't like the tempo you selected, just control z to undo the past multiple,
change the tempo on the project page and control L again. The number of copies
will still be there. I find 600 works for most songs if the time sig is 4/4.
sometimes I have to up it to 900.

Also, make sure you have the grid set to bars, with minor time divisions,
and snap to grid is selected.

Me, too. I rather like the way Paris sets up a click, and I think it's handy (for reasons I won't go into) to see the clicks on the "playing field." :)
