
Subject: Recording Drums

Posted by [brandon\[2\]](#) on Mon, 03 Jul 2006 17:53:08 GMT

[View Forum Message](#) <> [Reply to Message](#)

I have heard about recording drums without playing the crash cymbals and then adding them in later as samples.

Is something that is done a lot?

I can see where it would help to keep the beat uniform and give greater flexibility in the mix.

Any thoughts on this?

Thanks,

B

the biggest problem is getting the drummer to agree...then getting him to remember that he agreed...then getting him do it without a naked chick around....

if you do use this method i would record the kits crash and insert it where needed if for no other reason than its natural sustain vs the chopped sample version will be superior.

If you have a good drummer, it shouldn't have any bearing on the beat being more uniform or not - if the guy has bad timing, he's going to have bad timing on a kick/snare/hat kit as well as a full kit.

The thing you (or really, he) needs to decide is: "do I mind if it sounds like an overdub?" because when there are no cymbals to hit, chances are he's going to play hats straight through parts where there's going to be a crash... if there's a tom fill, he might come out of it later than he would if he were going to nail the crash at the top of the next measure - he might throw an extra tom hit in there, etc. So it can easily come out sounding like an overdub (or like Simon Phillips were playing - take your pick :)) But if that doesn't bother you, go for it - I can think of a few songs with various overdubbed drums on them... "Red Rain" comes to mind.

If you do it, make sure you record the overheads and any room mics for the drum-only part, too - unless you want a much more discrete drum sound, that is.

But why replace the cymbals with samples? Why not just have the guy do it as a regular overdub if you're going to go this route? Does the guy have crap cymbals or something like that?

Neil

Hey as drummer I resemble that.

Are you saying we have short memories and like naked chicks (at least your half right) or was that we drive bad and crash alot or a naked drummer crashed at your house ... whatever anyway back to the porn site.

I always ask "busy" drummers to play with out adding crashes.. Just groove..
Drummers have a way of playing too much cymbals which can get in the way
of the track.. I have over 100 gig of cymbals samples that always work better
than if the drummer does it..

No offense here guys but ttis is like asking a guitar player to leave all his notes on the 1st string out.

Although I will say it forces the drummer to concentrate on the groove of the song...just make sure that they (the band) know this before they come in to record

I just cut the string off when I need this... ;-) Easy, just remove the cymbals before recording ;-) chances are the drummer won't notice anyway....

David.

C'mon Dave you know you can't play with a missing E string...you wouldn't be able to do all those Strong Bad "meeedly meeedlies"...you're just pissed you

had to work Canada Day

I disagree. It's more like ty-wrapping a pianist's left hand to his belt loop. The inexperienced drummer will fill that freq space up beyond recognition.

I think Jodie Foster just entered the room wearing Carl's moniker.

Good analogy, and an experienced drummer will play them in the right places anyway.
